

PDP data flow

Product pages merge AEM-authored placeholders with dummyjson.com at preview and publish. A visitor request does not run the composer.

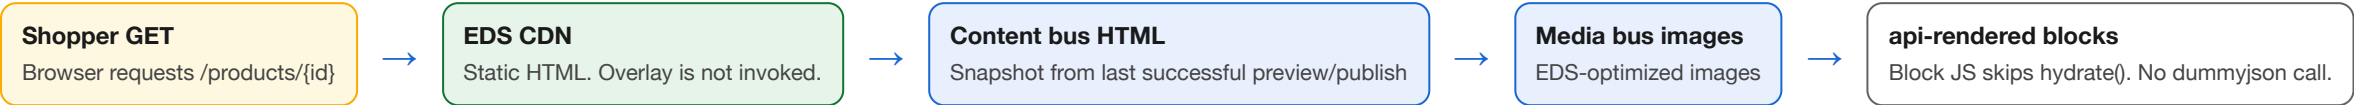

When the API-filled PDP is generated
The overlay compose action runs when AEM Admin API previews or publishes the path (author publish, Sidekick, refresh webhook, or scheduled refresh). It does not run when a shopper opens the live page.

1. Author preview / publish (API data is snapshotted here)

Compose 404 (no route, missing placeholders, no product key, or API failure) → Admin publishes the unmodified AEM page. Price and stock are never written into composed HTML.

2. Visitor request (no compose, no dummyjson on the critical path)

Fallback: Universal Editor never sees the overlay. If compose 404'd, placeholders ship and product-data.js fetches dummyjson in the browser (in-memory Map for that page load only).

3. Refresh after API data changes (snapshot is stale until republish)

A. Refresh webhook
ssr/actions/refresh accepts product ids or paths and bulk preview/publishes those pages.

B. Scheduled / bulk script
refresh-composed.mjs reads query-index.json, keeps /products/{id} paths, then preview + publish in batches.

C. Manual Sidekick
Author preview/publish of one PDP re-runs compose for that path only.

4. Where data is stored

What	Stored?	Where	When written
Authored PDP shell	Yes	AEM Author	Author save
Merged HTML (specs, gallery markup, reviews, SEO, JSON-LD)	Yes — snapshot	EDS content bus, then CDN (.aem.page / .aem.live)	Successful overlay 200 during preview / publish
Product JSON from dummyjson	No durable store	Compose process memory, or a browser Map on hydrate	Fetches at compose time; hydrate only if blocks lack api-rendered
Gallery image bytes	Yes	EDS media bus	Preview ingestion of composed image URLs
Reviews kill switch	Yes (authored config)	/config/features in AEM / content bus	When that config page is published; composed PDPs pick it up only on refresh
Price and stock	Never in composed HTML	Omitted from server renderers on purpose	Would go stale between publishes
